| Power | 0,25 kW |
| Air | 250NL/minute at 6 bars - 8 boxes/min |

Optional extras

Print system adjusted to the specific requirements of the customer

About the product

CT 1826 folds lids or bottoms for 5 kg cartons for shell-on shrimps. The carton magazine is integrated in the machine. CT 1826 is designed to be integrated in an automatic line, delivering the lids/bottoms to the weighing stations. The machine delivers the folded box with the opening facing down and is preferred for lid cartons. The flat sheets of carton are fed to a 650 piece magazine and conveyed to the forming unit by the pneumatic systems. The forming head folds and locks the parts without using glue in the process. The machine is extremely user-friendly, and it is easy to change between forming lids and bottoms. It can also be equipped with labelling/printing system. This reliable machine folds perfect boxes at a high-speed capacity of up to 8 pieces per minute.
